

PRONTO-Xi

iSupplyGlobal

Cut the cost of your B2B electronic commerce transactions by ensuring your product information integrates with that of your trading partners.

Seamless Order Flow

Errors in electronic order transactions cost industry millions of dollars per year. The principal cause of such errors is lack of data integrity. Good quality information is crucial to effective B2B trading. PRONTO-Xi iSupplyGlobal increases the accuracy of your incoming electronic orders by improving the quality of the product data you provide to your trading partners in a seamless, automatic and cost effective manner.

PRONTO-Xi iSupplyGlobal is a fully integrated module that ensures Data Integrity and Synchronisation (DIS) of your product data, so when your trading partners send you electronic orders, you can be sure they are correct and will flow seamlessly into your PRONTO-Xi sales order management system.

Improved Return on Investment

Extracting further value from your PRONTO-Xi investment by extending your supply chain capabilities, iSupplyGlobal is fully certified by GS1 Australia fulfilling your GS1net compliance needs. By integrating your product information seamlessly with your trading partners, you add value to your supply chain partnerships and reduce the cost of doing business. Increasing market demand for Data Integrity and Synchronisation (DIS) is a key factor driving improved supply chain practices. Many trading partners now require their suppliers to comply with DIS. PRONTO-Xi iSupplyGlobal enables you to meet these requirements and to proactively engage with trading partners and improve day to day business processes.

Updating product information has traditionally been a manual, paper based process: you fax a buying form to your trading partner; they manually enter the updated information into their procurement system. This process is labor intensive and error prone. When electronic ordering systems use incorrect data to generate order transactions, errors have to be manually fixed, adding needless cost to the transaction.

Designed to operate in a global marketplace

PRONTO-Xi iSupplyGlobal allows suppliers in different markets to participate in Data Synchronization via the GDSN (Global Data Synchronization Network) Global Registry. Which ever market you are based, iSupplyGlobal will allow you to publish product information via your local GDSN compliant data pool. This increases the visibility of your product range to participating trading partners who can access product information from a broader range of suppliers providing the opportunity for new trading relationships to be established.

Key Benefits

- ◆ Eliminate costly manual processes
- ◆ Comply with your trading partners' requirements
- ◆ Reduce the cost of providing product information to your partners
- ◆ Have more effective collaborative processes
- ◆ Improve overall supply chain efficiencies
- ◆ GDSN compliant

Technology

- ◆ iSupplyGlobal is a fully integrated module of PRONTO-Xi
- ◆ GS1net certified
- ◆ Requires PRONTO-Xi EDI
- ◆ Practical color coded interface for ease of use

How iSupplyGlobal works

PRONTO-Xi iSupplyGlobal will automatically and seamlessly:

1. extract updated information from your inventory master files;
2. provide input fields for GS1net specific data requirements;
3. validate against pre-determined business rules;
4. format the data to GS1net standards; and
5. upload the file to the GS1net data repository for publication to the relevant buying community.

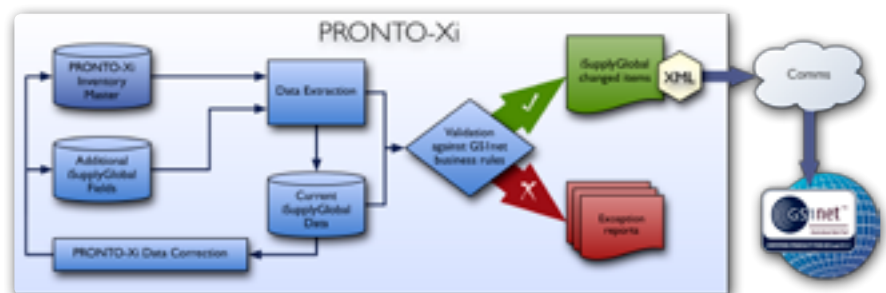

In accordance with GS1net design requirements, product and pricing information is grouped according to trading partner to ensure the security of information provided to each trading partner.

The integrated architecture of PRONTO-Xi iSupplyGlobal means that relevant product and pricing information goes directly from your PRONTO-Xi ERP to the GS1net data repository. From there, your trading partners can download the specific product catalogue that relates to them and automatically import it to their merchandising and procurement systems. Subsequently, incoming purchase orders will be accurate because there has been no manual intervention in getting the data into the trading partners' systems.

Another layer of efficiency saving you time and money is achieved by only having to publish your product updates once; each trading partner can then log in to GS1net and download their updates when they choose. This "one to many" process eliminates the need to supply discrete product updates to each trading partner. The final result is a more streamlined, accurate and cost effective supply chain process that adds value to all trading parties.

...so easy to work with™

PRONTO-Xi iSupplyGlobal will help you to add value to your trading partner relationships, giving your company a competitive edge in B2B commerce.
